PERGOLA SYSTEMS PRODUCT CATALGOUVE

SUPPLIER OF BAUHAUS

BAUHAUS

It is the budget friendly solution for unrestricted exterior places. It can easily be installed everywhere- terraces, gardens, cafe and restaurant fronts etc... It provides complete protection against the sun and weather, whatever the form of external factors may be.

(Aluminium louvred system) ensures a colourful touch to your exterior areas, where protection against all seasonal factors, like the heat in summer and snow and/or cold in winter, is needed. This system is perfect for creating bioclimatic areas with one click, being remotely controllable, lit with soft yet vibrant led lights. The technical specifications; Great stability against physical pressure, especially snow. Special design of the panels allow for an area with regulated temperatures. The hollow canals in the panels can be filled with polyurethane foam, or used as it is.

ARAR ALUMINIUM

After owning one of these systems, the only thing left to do will be experiencing the comfort and pleasure it gives one to be able to use such open areas without any restrictions and any economic stress.

ARAR ALUMINIUM

A solution for the inclined sunlight was needed, and our engineers worked day and night for a new desing. The result was Arar wintent, which can be attacheded to window fronts and on the sides of other systems, provding shades coming from all horizontal angles.

Acrylic, screen or vinly fabric variations, logo printing possibility, support for manual geared or remote controlled systems, modularity of attaching any kind of sensor and many more features place the Arar wintent on the list of our most popular products.

As a completely new concept in solar shading. Zip Screen can be used as side closures and shading solution for nearly any kind of environment. The perforated screen fabric secures one side of the extremities of the other, protecting from wind and rain, all that while still letting fresh air through. The side canals tightly grip onto the fabric so it won't disassemble while in use.

ARAR ALUMINIUM

Designed with the idea of flexibility and durability in mind, this system will completely hide the fabric of the awning in a full cassette, so that it won't get dirty or damaged while not in use. Modularity allows for diverse sensors to be attached to the system, so you will never have to worry about opening/closing it yourself.

The classical and popular solution for solar shading, the awning has been refurbished and is now offering a modernised and sturdier construction. Spring arms allow to a maximum of a 70 degree angle. Different colour and design options like striped or printed fabric contribute to overall appeal.

Cassette blind is an easy to use vertical system, designed to keep rain and wind out while providing the full extend of the scenery with transparent mica fabric. It has remote and manual controlled variations and is suitable for attachment of sensors.
